KPOT
KOREAN BBQ & HOT POT

샤브샤브

뜨거운 냄비

Hot pot is a Asian cooking method, prepared with a simmering pot of soup stock at the dining table, containing a variety of East Asian foodstuffs and ingredients. While the hot pot is kept simmering, ingredients are placed into the pot and are cooked at the table, in a manner similar to fondue. Typical hot pot dishes include thinly sliced meat, leaf vegetables, mushrooms, wontons, egg dumplings, tofu, and seafood. The cooked food is usually eaten with a dipping sauce.

Public hearing and consideration of the request by Jacob Jansen, Authentic Child Care, for a Conditional Use Permit in the C2 District at 530 N. 108th Place for a daycare establishment

A. Background/Options

On January 17, 2023, the Common Council approved a conditional use permit for a childcare facility at 530 N. 108th Place in the General Commercial (C2) zoning district. The childcare facility has not yet commenced operations. The applicant is now proposing the following increases to the use:

	Current Approval	Proposed Expansion
Square Footage	1,600 sq. ft.	4,200 sq. ft.
No. of Children	16	60
No. of Employees	6	12
Children Age Range	6 weeks - 2 years	6 weeks - 5 years

The operating hours will remain the same as previously approved: from 6:00 am to 6:00 pm Monday through Friday. Drop off and pick up of children is still planned to occur within the parking area at the south end of the building adjacent to the facility's entrance. The outdoor play area, enclosed with a four-foot tall chain link fence, will remain as previously approved at the southeast corner of the site (see attached site plan). However, the applicant proposes to install an additional wood fence along the western edge of the playground area for additional security from railroad tracks. According to parking counts taken at the project site, a sufficient amount of parking remains available for all users of the site, including the proposed use.

Attached to this report is the applicant's project request and proposed plans. The previous approval is linked.

Nature of Business – Child Care Center

This child care business was already approved in January 2023, but because of an issue with extra bathrooms needed in the end unit, this made the start up costs prohibitive and the space unprofitable for 14 children after design. Currently the state licensing for child care does not require children under 30 months to be counted for bathrooms and we thought the current 1 bathroom would be enough for the 6 employees based on the Department of Families and Children child care code. The Wauwatosa city code DOES count bathrooms for infants and toddlers and required a second bathroom. Because of this, the only way to make this project work is to expand earlier/now (we were planning to expand Nov. 1st 2023). While we were hoping to clear some initial hurdles before going full speed, the project is not viable any other way than to expand now instead of November.

The current plan will be for approximately 60 children ages 6 weeks to 5 years old along with 12 teachers. It will be open 6am to 6pm as before. The playground will remain the same size and was already approved. We would like to add a secondary 6 foot fence along the train track fence to alleviate concern from all aldermen and alderwomen however this will not effect square footage or parking spaces.

RE: Conditional Use Permit – 1300 Glenview Place

Dear Art:

Hansen Storage Company is requesting a conditional use permit for product storage within the entire building at 1300 Glenview Place. Hansen Storage Company will occupy a portion of the building, the specific location and square footage to be determined, and the remaining portion of the building will be leased to other businesses for their product storage. Hansen Storage Company will use its portion of the building primarily for long-term product storage, and we anticipate approximately ten employees to work at this location. With less employees than Hansen Storage Company's 112th Street location and long-term storage use, this site is anticipated to generate significantly less traffic than Hansen Storage Company's location on 112th Street. The site will be used for indoor storage only; no outdoor storage is being requested.

If you have any questions or require further information, please contact us.

Sincerely,

Peter J. Hansen
President

The applicant is requesting approval of a conditional use permit for two restaurant uses within an 8,180 square-foot multi-tenant commercial building at the southeast corner of N. Mayfair Road and Research Drive in the Special Purpose District - Research Park (SP-RP) zone. Three tenant spaces are proposed in the building consisting of an eating and drinking establishment with drive through and outdoor dining at the north end, a commercial use compliant with the land use standards of the SP-RP zone in the middle space, and another eating and drinking establishment with outdoor eating area at the south end of the building.

The project site is currently developed with a portion of a parking area serving a professional office building located at 10701 Research Drive. Access to the site is provided from a shared driveway at the northeast corner of the site from Research Drive. Surrounding land uses include professional offices uses to the north and east, a parking lot to the south, and commercial uses to the west.

B. Staff Comments

Planning/Zoning Division
Parking provided on the parcel for the proposed uses does not meet WMC requirements and access to the parcel is on an adjacent parcel. A shared parking and access agreement for the overall Research One development (consisting of parcels 379-1001-000 thru 3791004-000) is required to comply with parking and access requirements.

Master Plan Compliance: The project site is located within the Wauwatosa Life Sciences District Master Plan (LSDMP), which encourages high-density residential and retail development with minimal street setbacks along Mayfair Road and south of Watertown Plank Road. The SP-RP zoning regulations have not been updated to reflect the recommendations of the Plan. The proposed development meets required setbacks. LSDMP Link: <https://www.wauwatosa.net/home/showpublisheddocument/520/636809009719400000>

Building Division
Plan review, applicable building permits and DSPS plan approvals required.

City Assessor's Office
Provide detailed costs of any alterations and/or new construction, as well as income and expense information as requested by the Assessor's Office.

City Clerk's Office
Contact the Clerk's Office if any business licenses are needed.

Engineering Division

Site plans showing adequate sewer capacity, construction staging information, lighting, and storm water management subject to approval by the Engineering Division.

The proposed sanitary sewer is a private interceptor sewer and is subject to approval by MMSD and requires full time public inspection paid for by the development.

Site plans must show vehicle stacking spaces, location of drive-through windows, and communication systems in accordance with City Code 24.11.100.

Short- and long-term bicycle parking must be clearly identified and quantified to confirm compliance with City Code 24.11.080.

Pedestrian connectivity to the public right-of-way and within the development must be in accordance with City Code 24.13.030.

The City's Bike and Pedestrian Plan recommends a multi-use trail on the east side of N. Mayfair Road. City staff is in the process of applying for a State grant for the construction of a multi-use trail that will connect the Regional Medical Campus to this development. The applicant shall continue to support efforts for this multi-use trail connection and work with staff on providing an easement.

The overall development must accommodate all travel modes in the primary access routes or private streets. Bike and pedestrian accommodations must meet the intent of the Tosa Streets Ordinance (Code Section 12.10).

Applicant shall meet all requirements of code chapter 24.12 pertaining to landscaping; including the requirement for a landscape performance guarantee (Section 24.12.070).

Fire Department
FD met with Irgens design group and stated FDC shall be located on East side, North corner. FD also stated the Mayfair address was acceptable to FD. Proposed hydrant location good. All NFPA fire codes will be applied.

Health Department
Applicable food licenses required.

Police Department
No comments provided.

C. Recommendation

Staff recommends approvals subject to:

1. Establishing hours of operation. Facility operations shall not occur before 6:00 am or after 11:00 pm.
2. Prior to occupancy issuance, the applicant shall record a shared parking and access agreement, approved by the City, between the properties at the Research One development.
3. Prior to occupancy or issuance of a building permit for any future eating and drinking establishment of the northern or southern end suites, whichever occurs first, the user must submit a project description to the Planning Division for review and approval to ensure Conditional Use Permit compliance.
4. Providing detailed costs of any alterations and/or new construction, as well as income and expense as requested by the Assessor's office.
5. Obtaining site plan approval that addresses and complies with Engineering staff report comments.

6. Full time public inspection of the private interceptor sewer shall be paid for by the development.
7. Compliance with bike and pedestrian regulations including connectivity, short and long-term bicycle parking accommodations, and Tosa Streets; as well as providing an easement for the Mayfair Road multi-use trail.
8. Under WMC 24.16.040I., a Conditional Use will lapse and have no further effect one year after it is approved by the Common Council, unless a building permit has been issued (if required); the use or structure has been lawfully established; or unless a different lapse of approval period or point of expiration has been expressly established by the Common Council.
9. Obtaining other required licenses, permits, and approvals.

Request by Jonathan Ward, Altius Building Company, for a Zoning Map Amendment from C2 District to C2/Planned Unit Development (PUD) District at 11400 W. Blue Mound Road

A. Background/Options

The applicant is requesting a zoning map amendment from General Commercial (C2) District to C2/Planned Unit Development (PUD) Overlay District on an approximately 0.8 acre site located on the north side of Blue Mound Road between 114th Street and 115th Street. The intent of the amendment is to establish a PUD for a four-story, multi-unit residential development consisting of 41 residential units. Rezoning the site to C2/PUD Overlay District is necessary to allow for multi-family residential development, reduce required setbacks to move the building closer to the sidewalks, and reduce the lot area per unit requirement. Surrounding land uses include single-family residential uses to the north and commercial uses to the east, west, and south.

Attached to this report is the applicant's project statement and zoning information. The next agenda item provides additional information about the proposed development.

A zoning map amendment application requires a public hearing date. As part of a motion, the Plan Commission should set a public hearing date of April 18, 2023.

B. Staff Comments

Planning/Zoning Division
This request is contingent upon approval and filing the related certified survey map. A public hearing on April 18, 2023 is required.

The Future Land Use Map in the 2008-2030 Comprehensive Plan indicates maintaining the 2008 uses of the parcels through the future land use category of “Planned Commercial”. Many goals, objectives, and policies found in Volume Two: Polices and Recommendations, primarily in Chapter 2.1 Land Use and Chapter 2.3 Housing and Neighborhood Development, support multifamily housing development opportunities in the City. In addition, to address changing conditions over the life of the Plan, Volume Two of the Comprehensive Plan on page 186 states “the precise location of zoning district boundaries may vary, as judged appropriate by the Plan Commission and City Council. Departures from the exact land use boundaries depicted on the Future Land Use map may be particularly appropriate for planned development projects, projects involving a mix of land uses and/or residential development types, properties split by zoning districts and/or properties located at the edges of future land use areas. In their consideration of zoning map issues, the Plan Commission and City Council will also evaluate the specific timing of the zoning map amendment request, its relationship to the nature of both existing and planned land uses, and the details of the proposed development. Therefore, this Plan allows for the timing of zoning actions and the refinement of the precise recommended land use boundaries through the zoning, conditional use, planned development, and land division processes.” Volume Two of the Comprehensive Plan is found here:

The City's 2023 Housing Study and Needs Analysis identifies a continued demand for housing units that will likely be supplied through multi-family developments. The Housing Study is found here:

<https://www.wauwatosa.net/home/showpublisheddocument/4879/638125711998330000>

Finally, consistent feedback heard during the review of other multi-family development proposals is multi-family developments should be located in areas where there is little impact to residential neighbors. While there are adjacent residential neighbors, the height of the proposed building is only five feet higher than the existing buildings and the massing is similar to the exisitng buildings.

The applicant also provided additional information related to the project's consistency with adopted plans and studies.

11400-30 W. Bluemound Road PUD Redevelopment Narrative

Revel Real Estate Investments and Altius Development Integration Services are partnering with Smart Asset Capital to propose this demolition and redevelopment of the existing office buildings and parking deck at 11400 and 11430 W. Bluemound Road into a 41-unit multifamily building. Smart Asset Capital owns the properties through a related company and have been actively working with the City to create this redevelopment plan to address the structural issues with the parking deck. The existing buildings are class C office space and the demand for this grade of office space is low making it difficult to support the costs for significant capital improvements to the parking deck; however, the market for multifamily residential continues to expand and we believe the best use of this property would be to redevelop it into multifamily housing.

The new building will be oriented up along Bluemound Road partially wrapping the corner along 115th Street with a 5' landscape buffer along the sidewalk, to move the massing of the building to the front of the site, away from the single-family neighborhood behind it. This will both define the urban street edge, while also screening additional surface parking behind the building. This parking will also act as a transitional buffer to the neighborhood. There will be 41 parking stalls in the garage and 30 surface spaces totaling 71 spaces, or 1.73 per unit. The rear parking will be an improvement over the existing parking deck as it will be brought down to grade level with landscaping for screening. Site access will be off of 114th and 115th streets, the existing Bluemound curb cut will be eliminated. The total interior parking lot paved area will be 10,883 SF which requires 1,083 SF of interior parking landscaped area and six trees; we will provide 1,200 SF of interior parking landscaping area and seven trees. Other site details include two, five-stall bike parking stalls along sidewalk on the east side, along with a pet waste station. The refuse area will be located inside the building in the parking garage to minimize any noxious odors or debris from an outdoor refuse enclosure.

The building's public spaces will be located in the most prominent corner near the intersection of Bluemound and 114th Street in order to activate the street front. The first-floor lobby will have large windows with a front door off Bluemound to bring light, life and energy to the street level to create a sense of place, with eyes on the street for safety. Above the lobby on the second floor will be a community room and fitness center also with large windows and a rooftop deck over the rear lobby entrance to enhance the sense of activity and street life at the corner. The rest of the building will be three-stories of apartments over parking at-grade with 65,936 total s.f. a height of 46 feet or 4.7' taller than the existing building on the west side.

The project will contain a mix of unit sizes with fifteen one-bedroom, six one-bedroom with dens, seventeen two-bedroom, and three three-bedroom units to accommodate housing needs for a wide range of family sizes. Each unit will have a deck, stainless steel appliances, quartz counter tops, WiFi thermostats and keyless entries. Community amenities include a club room, rooftop terrace, fitness room, storage, bike storage, building-wide WiFi internet, rooftop solar and electric car chargers.

This will be a significant redevelopment investment of nearly $13.6 million removing two deteriorating existing buildings with diminishing economic life and tax base with focused density for population growth along a State highway and one the City's main transportation corridors. It will improve upon the existing situation where the wall of the parking deck virtually abuts the neighbor's property line. This project promotes mixed-residential development, and walkability with responsible density, massing and height that is appropriate for this site and neighborhood in compliance of the City's Comprehensive Plan and Comprehensive Housing Study Needs Analysis.

Property: 11400 W. Bluemound Rd, tax key 411-0175-004 (.339 acres)
11430 W. Bluemound Rd, tax key 411-0175-003 (.460 acres)
The combined site is 0.80 acres.

The site is currently zoned C-2 Commercial which does not permit multi-unit residential buildings but has no height limits. Secondly, the 1,000 minimum lot area per unit allowed under C-2 only applies to mixed-use buildings and would only permit a maximum of 34 units. This few units makes the feasibility of clearing the existing buildings to redevelop the site, without public assistance, very difficult, this project is not requesting any public assistance. Finally, we're requesting a reduction in the 10-foot minimum front setback from the underlying zoning in order to move the building closer to the sidewalk in order to both accommodate an additional nine parking spaces in back and while minimizing any shadow the building would cast over neighboring properties to the north. We're requesting a 5.5' front setback and 4.8' setback on the west side where the existing zoning calls for 5' minimum. Therefore, we are requesting PUD zoning to allow for a multi-unit residential use and flexibility on the minimum lot area and setbacks.

- Fire access is provided on three sides of the building from the public streets with existing fire hydrants in close proximity. We intend to build to a NFPA 13 fire suppression rating rather than 13R for a higher level of protection.
- Stormwater catch basins will be connected to existing storm sewer lines in Bluemound Road. The increase in impervious surface over the existing site is negligible and far below ½ acre, so it does not require on-site stormwater detention.

24.05.040 - /PUD, Planned Unit Development Overlay.

A. Purpose.

1. General. The /PUD, Planned Unit Development Overlay district is intended to accommodate development that may be difficult if not impossible to carry out under

otherwise applicable zoning district standards. Examples of the types of development that may benefit from the PUD overlay district include the following:

a. Enhanced Protection of Natural Resource Areas. Developments that offer enhanced protection of natural resources and sensitive environmental features, including streams, water bodies, floodplains, wetlands, steep slopes and woodlands.

b. Energy Conservation/Sustainability. Developments that achieve extremely high levels of energy conservation and developments that achieve extremely high levels of sustainability, as evidenced by commitment to attain at least LEED Gold or equivalent ratings by recognized green building organizations.

c. Traditional Urban Development. Developments characterized by parcel configurations, street patterns, streetscapes and neighborhood amenities commonly found in urban neighborhoods platted or otherwise created before the 1950s.

d. Mixed-use Development. Developments that contain a complementary mix of residential and nonresidential uses.

Applicant Response: We are requesting a PUD zoning to accommodate a new 41-unit multi-unit residential building redevelopment of the deteriorating office buildings because the C-2 zoning does not accommodate multi-unit buildings as a permitted or conditional use; however, it does permit vertical mixed-use buildings which would be substantially the same type of use, with similar size and massing only with a higher intensity of use and traffic. We are requesting flexibility with the underlying 10' front set-back requirement to pull the massing of the building closer to the Bluemound street front as would be more typical for traditional urban development while creating a larger buffer behind the building for the residential neighbors. This front setback flexibility is necessary to accommodate an adequate number of parking stalls behind the building to support the density necessary to make the redevelopment feasible without public assistance. The itself will provide parking screening in front and landscaping will be added to provide screening around the outdoor parking in back. While the building itself will be a single use, it promotes mixed use development by incorporating residences in a commercial district with many restaurants and services within walking distance.

2. Objectives. Different types of PUDs will promote different planning goals. In general, however, PUDs are intended to promote the following objectives:

a. implementation of and consistency with the city's adopted plans and policies;

b. flexibility and creativity in responding to changing social, economic and market conditions allowing greater public benefits than could be achieved using conventional zoning and development regulations;

c. efficient and economical provision of public facilities and services;

d. economic opportunity and environmental and social equity for residents;

e. variety in housing types and sizes to accommodate households of all ages, sizes, incomes and lifestyle choices;

f. compact, mixed-use development patterns where residential, commercial, civic and open spaces are located in close proximity to one another;

g. a coordinated transportation system that includes an inter-connected hierarchy of facilities for pedestrians, bicycles and vehicles;

h. compatibility of buildings and other improvements as determined by their arrangement, massing, form, character and landscaping;

i. the protection and enhancement of open space amenities and natural resource features such as tree canopy, native vegetation, wetland and stream buffer area and hydric soils in the development design;

j. the incorporation of sustainable development features including green infrastructure practices in landscapes and parking area, to maximize the aesthetic and water quality benefits of stormwater management practices; and

k. attractive, high-quality landscaping, lighting, architecture and signage, including the use of native landscaping, that reflects the unique character of the development.

Applicant Response: Excerpt from the Comprehensive Plan:

"As a first-ring community outside the City of Milwaukee, the future vitality of the community will depend largely on its ability to maintain a high quality of life for residents, capitalize on its numerous economic assets, and effectively promote, direct, and manage reinvestments in underused and functionally obsolete properties."
– City of Wauwatosa Comprehensive Plan, p. 23

This project implements and advances the City's objectives to reinvest in underused and functionally obsolete properties. The parking garage of the existing buildings is failing and needs extraordinary investment on repairs. These repairs would be throwing good many after bad because the office buildings are obsolete and will not be able to command adequate rents to justify the expense. Furthermore, the office market for class C office is extremely soft with no relief in sight and high vacancy and even bankruptcies for competing properties in the market. This property has become an eyesore for the neighborhood, the parking structure is no longer sound, and the market demand for office product like this is very weak which is why this property is a risk of becoming a blight and needs to be redeveloped.

Furthermore, the City of Wauwatosa's Housing has identified a significant shortage in all housing types and all new housing promotes competition to help keep housing affordable. This project will offer a variety of unit sizes including one, one with dens, two and three-bedroom units to appeal to a variety of intergenerational residents from active seniors to families with children. The scale of this building is comparable to the scale of the existing buildings on the site and will cluster higher-density residential along transportation corridors. The property is located just a few blocks from the Oak Leaf Trail and bike storage will be incorporated and the garage and outside. Finally, solar panels will be incorporated on the roof and several electric car charges will be included in the garage.

B. Procedure. PUDs must be reviewed and approved in accordance with the procedures of Section 24.16.050. Applications must be signed by all property owners of record.

C. Zoning Map. Approved PUDs must be identified on the zoning map by appending the map symbol "/PUD" as a suffix to the base zoning district classification, as in "R8/PUD."

D. Developer's Statement of Intent. Each PUD application must include a written explanation from the applicant describing the community benefits of the proposed development and how the proposed development provides greater benefits to the city than would a development carried out in accordance with otherwise applicable zoning ordinance standards. The statement must also include a comparison of the proposed development with the standards of the base zoning district.

Applicant Response: The benefits to the community of this development rather than one carried out in accordance to the C2 zoning is that as a mid-rise residential building it is a less intense use than the alternative uses allowed and promotes a mixed-use neighborhood with higher density residential along transportation corridors. The stated purpose of the C2 zoning is to accommodate, "a broad range of business and commercial uses, often in the physical form of shopping centers, large-format retail and other destination-oriented uses in which a large percentage of customers will arrive by automobile." This could include much higher traffic and intense uses such as a grocery store, medical office, other retailers. Unfortunately, while the City's Comprehensive Plan repeatedly calls for mixed-use development, it doesn't actually permit multi-unit residential buildings in commercially zoned areas, which would create mixed-use neighborhoods. Furthermore, there is no height restriction or minimum lot area which would allow a taller building to be built casting a shadow over the single-family neighboring properties to the north. Likewise, adhering to the 10' setback would push the massing of the building closer to the residences casting a shadow over their property.

E. Approval Criteria. A /PUD overlay zoning district may be approved only when the common council determines that the proposed PUD would result in a greater benefit to the city as a whole than would development under conventional zoning district regulations.

F. Standards Eligible for Modification. Unless otherwise expressly approved by the common council as part of the PUD approval process, PUDs are subject to all applicable standards of this zoning ordinance. The common council is authorized to approve PUDs that deviate from strict compliance with specified standards if they determine that the resulting development satisfies the approval criteria of Section 24.05.040E. PUDs may not deviate from compliance with Title 14 (Fire Prevention) or Title 15 (Buildings and Construction) of the city code of ordinances.

G. Allowed Uses. The uses to be allowed in a PUD must be identified as part of the PUD approval process along with all applicable conditions or supplemental use regulations that apply to such uses. Regardless of the underlying zoning, the common council may approve a mix of use types within a PUD as a means of accommodating mixed-use developments and developments with a broader range of housing types and housing options than allowed by the underlying zoning district.

H. Lot Size. Minimum lot area and width standards of the base zoning district may be reduced as part of the PUD approval, provided that lot sizes are adequate to safely accommodate all proposed buildings and site features.

I. Residential Density. The allowable residential density of the base zoning district may be changed if the common council determines that such a change is warranted to support the public benefit likely to result from the proposed development and that the resulting density can be supported by existing and planned public facilities and services.

J. Setbacks. The minimum setback standards of the base zoning district may be reduced as part of the PUD approval.

K. Height. The common council may allow an increase in allowable building heights if it determines that such an increase is warranted to support the public benefit likely to result from the proposed development.

L. Parking and Loading. Off-street parking and loading requirements may be modified when the common council determines that modified requirements are in keeping with projected parking and loading demand of the proposed development, that other means of meeting access demand will be provided or that the requested modifications will better meet the purpose of the PUD overlay.

M. Streets. Alternatives to otherwise "standard" street cross-sections and designs may be approved when the common council determines that such alternative designs would better meet the purpose of the PUD overlay, while still providing a safe and efficient traffic circulation system.

Request by Jonathan Ward, Altius Building Company, for Planned Unit Development preliminary plans at 11400 W. Blue Mound Road for a multi-unit building

Submitted by:
Arthur Pinon
Department:
Planning Division

A. Background/Options

The applicant is requesting approval of a preliminary planned unit development (PUD) to construct a four-story, multi-family residential housing project on an approximately 0.8 acre site. The proposed project consists 41 apartments with a mix of one, two, and three bedroom units. The main building entrance is located at the corner of 114th Street and the ground floor serves as a parking garage with residential units located on the upper floors. Vehicular access to the site is provided from 114th Street and 115th Street with 71 parking spaces onsite (41 garage spaces and 30 surface spaces). Short-term bicycle parking is provided at the east end of the building adjacent to the main entrance at 114th Sreet and long-term bicycle storage is provided inside the parking garage. Community amenities include a club room, rooftop terrace, fitness room, rooftop solar, and electric vehicle chargers.

Currently, the project site contains two (2) office buildings with a parking structures at the rear. In 2021, a City inspection revealed significant structural issues with the western parking structure and the structure's certificate of occupancy was revoked.

A preliminary planned unit development application requires a public hearing. As part of a motion, the Plan Commission should set a public hearing date of April 18, 2023.

Attached to this report is the applicant's narrative, and development plans.

B. Staff comments

Planning/Zoning Division: A public hearing on April 18, 2023 is required. This request is contingent upon approval of the zoning map amendment and the certified survey map applications. Filing the certified survey map is required prior to issuing building permits.

The project meets the objectives for a PUD outlined in WMC 24.05.040.A.2 by accomplishing certain housing goals in the City's Comprehensive Plan. Specifically, the project adds to the City's variety of housing types and densities, helps to create a "Complete Neighborhood" along Blue Mound Road by placing residential development adjacent to commercial uses, and serves as a housing option for seniors, young professionals, students, and other residents who cannot afford or do not wish to live in or maintain a single-family home.

The 2022 Wauwatosa vacancy rate for buildings with 4-25 units was 2.5% and for buildings with 26+ units was 2.2%. Given pent up demand from many years where no housing was constructed, the City's large non-resident

workforce population, and continued developer interest in undertaking multi-family projects, demonstrates there remains demand for apartments at varying rent levels, including higher end. Vacancy rates are one of the key statistics the National Association of Home Builders track to judge the health and direction of the housing market. Low vacancy rates are typically interpreted as a sign of tight housing markets, with lower vacancy rates signaling a greater housing shortage, and vice versa for high vacancy rates. While the general perception of property vacancies may be a negative one, vacancy on some level is necessary for a healthy market and economy. Healthy vacancy rates ensure rents remain relatively stable and assist employers in recruiting and retaining workers who can find and afford a place to live in the community. The median rental vacancy rate in the United States has hovered around 7% in recent years and an average vacancy rate between 5-8 % is considered healthy. While there is a low vacancy rate, leasing agencies generally advertise because they want potential tenants to inquire about their residential communities and availability to have a database of prospective clients to contact when units become available.

Building Division: Design Review Board approval required; plan review, building permits and DSPS plan approvals required.

Assessor's Office: Provide detailed costs of any alterations and/or new construction, as well as income and expense information as requested by the Assessor's Office.

City Clerk's Office: No issues.

Engineering Division: Site plans showing adequate sewer capacity, construction staging information, lighting, and storm water management subject to approval by the Engineering Division.

The proposed development is located near a geographic high point and lower water pressures may exist. Fire and domestic water demand calculations must be submitted prior to Final PUD plan approval. Hydrant tests will be required by the developer and must be coordinated with the Water and Engineering Departments. Fire flow calculations must be in accordance with City Code Section 14.20.080 and NFPA 13.

All existing utilities that will not be re-used for the proposed development must be abandoned at the main.

Fire Department Connections and emergency access is subject to approval by the Fire Department.

Short- and long-term bicycle parking must be clearly identified and quantified to confirm compliance with City Code 24.11.080. Site data table must include number of housing units provided in each building broken down by type (number of 1-bedroom, 2-bedroom, etc.).

The City is currently anticipating pavement and utility construction in N. 115th Street from Bluemound Road to Underwood Creek Parkway during the summer of 2023. Applicant shall coordinate locations and construction of proposed utilities and drive approach on N. 115th Street with City staff.

Any public sidewalk damaged during construction must be replaced as directed by the Engineering Department and will require a Street Occupancy permit.

A lighting plan must be submitted and adhere to Board of Public Works rules regulating maximum illumination at property lines.

Applicant shall meet all requirements of code chapter 24.12 pertaining to landscaping; including the requirement for a landscape performance guarantee (Section 24.12.070).

The construction staging plan shows public sidewalk closures on the east, south and west sides of the proposed development. If the public sidewalks are proposed to be closed for long term duration, the sidewalk closure is subject to approval by the Board of Public Works. The construction staging plan must be updated to include the

crane swing radius. If the crane swing radius encroaches within the public right-of-way, the encroachment is subject to approval by the Board of Public Works. If the crane swing radius encroaches onto adjacent private property, the applicant will be required to work with affect adjacent property owners for crane swing rights and encroachment. The construction staging plan should also identify existing trees and landscaping that are to remain and how those features will be protected during construction. If any existing public street trees are damaged during construction, the applicant will be required to pay a street tree replacement fee. The construction staging plan must identify where contractor parking will be provided. If contractors will utilize public street parking, local parking regulations must be followed.

Engineering compared the number of trips that will be generated by this multi-family proposal and compared it to the existing office space use. The multi-family use generates 20 more trips (10 more in/10 more out) over the course of a weekday. On a peak hour basis, the multi-family generates 20 fewer trips (25 fewer in/5 more out) during the morning peak hour and 15 fewer trips (5 more in/20 fewer out) during the evening peak hour. Staff does not have any concerns about traffic operations with this proposal.

Fire Department: No comments provided.

Health Department: No comments provided.

Police Department: No comments provided.

NO. 40	0-60
NO. 200	0-35

17. THE MAXIMUM PARTICLE SIZE OF POORLY-GRADED GRAVELS (GP) (NO FINES) SHOULD NOT EXCEED 3/4 INCH UNLESS EXPRESSLY APPROVED BY THE WALL DESIGN ENGINEER AND THE LONG-TERM DESIGN STRENGTH (LTDS) OF THE GEOSYNTHETIC IS REDUCED TO ACCOUNT FOR ADDITIONAL INSTALLATION DAMAGE FROM PARTICLES LARGER THAN THIS MAXIMUM.

PLANTING DELIVERY, STORAGE, & HANDLING:

1. BULK MATERIALS:
   - 1.1. DO NOT DUMP OR STORE BULK MATERIALS NEAR STRUCTURES, UTILITIES, WALKWAYS AND PAVEMENTS, OR ON EXISTING TURF AREAS OR PLANTS.
2. DO NOT PRUNE TREES AND SHRUBS BEFORE DELIVERY. PROTECT BARK, BRANCHES, AND ROOT SYSTEMS FROM SUN SCALD, DRYING, WIND BURN, SWEATING, WHIPPING, AND OTHER HANDLING AND TYING DAMAGE. DO NOT BEND OR BIND-TIE TREES OR SHRUBS IN SUCH A MANNER AS TO DESTROY THEIR NATURAL SHAPE. PROVIDE PROTECTIVE COVERING OF PLANTS DURING SHIPPING AND DELIVERY. DO NOT DROP PLANTS DURING DELIVERY AND HANDLING.
3. HANDLE PLANTING STOCK BY ROOT BALL.
4. DELIVER PLANTS AFTER PREPARATIONS FOR PLANTING HAVE BEEN COMPLETED AND INSTALL IMMEDIATELY. IF PLANTING IS DELAYED MORE THAN SIX HOURS AFTER DELIVERY, SET PLANTS AND TREES IN SHADED LOCATION, PROTECT FROM WEATHER AND MECHANICAL DAMAGE, AND KEEP ROOTS MOIST.
   - 4.1. SET BALLED STOCK ON GROUND AND COVER BALL WITH SOIL, PEAT MOSS, SAWDUST, OR OTHER ACCEPTABLE MATERIAL.
   - 4.2. WATER ROOT SYSTEMS OF PLANTS STORED ON-SITE DEEPLY AND THOROUGHLY WITH A FINE-MIST SPRAY. WATER AS OFTEN AS NECESSARY TO MAINTAIN ROOT SYSTEMS IN A MOIST, BUT NOT OVERLY WET CONDITION.

EXCAVATION FOR TREES & SHRUBS

1. EXCAVATE CIRCULAR PLANTING PITS AS INDICATED IN DRAWINGS. TRIM PERIMETER OF BOTTOM LEAVING CENTER AREA OF BOTTOM RAISED SLIGHTLY TO SUPPORT ROOT BALL AND ASSIST IN DRAINAGE AWAY FROM CENTER. DO NOT FURTHER DISTURB BASE. ENSURE THAT ROOT BALL WILL SIT ON UNDISTURBED BASE SOIL TO PREVENT SETTLING. SCARIFY SIDES OF PLANTING PIT SMEARED OR SMOOTHED DURING EXCAVATION.
   - 1.1. EXCAVATE APPROXIMATELY THREE TIMES AS WIDE AS BALL DIAMETER FOR BALLED AND BURLAPPED STOCK.
   - 1.2. DO NOT EXCAVATE DEEPER THAN DEPTH OF THE ROOT BALL, MEASURED FROM THE ROOT FLARE TO THE BOTTOM OF THE ROOT BALL.
   - 1.3. IF AREA UNDER THE PLANT WAS INITIALLY DUG TOO DEEP, ADD SOIL TO RAISE IT TO CORRECT LEVEL AND THOROUGHLY TAMP THE ADDED SOIL TO PREVENT SETTLING.
   - 1.4. MAINTAIN REQUIRED ANGELS OF REPOSE OF ADJACENT MATERIALS AS SHOWN IN DRAWINGS. DO NOT EXCAVATE SUBGRADES OF ADJACENT PAVING, STRUCTURES, HARDSCAPES, OR OTHER NEW OR EXISTING IMPROVEMENTS.
   - 1.5. MAINTAIN SUPERVISION OF EXCAVATIONS DURING WORKING HOURS.
   - 1.6. KEEP EXCAVATIONS COVERED OR OTHERWISE PROTECTED WHEN UNATTENDED BY INSTALLER'S PERSONNEL.
2. SUBSOIL AND TOPSOIL REMOVED FROM EXCAVATIONS MAY BE USED AS PLANTING SOIL IF IT IS USED AS PART OF THE ENVIRONMENTAL CAP MATERIAL PLACED AS PART OF CIVIL SITE CONSTRUCTION (SEE DETAIL D ON C402). ANY SUBSOIL OR TOPSOIL REMOVED FROM EXCAVATIONS WHICH IS NOT A PART OF THE ENVIRONMENTAL CLEAN CAP, SHALL BE HANDLED IN ACCORDANCE WITH THE SITE SOIL MANAGEMENT PLAN.
3. NOTIFY OWNER'S PROJECT REPRESENTATIVE IF UNEXPECTED ROCK OR OBSTRUCTIONS DETRIMENTAL TO TREES OR SHRUBS ARE ENCOUNTERED IN EXCAVATIONS.
4. NOTIFY OWNER'S PROJECT REPRESENTATIVE IF SUBSOIL CONDITIONS EVIDENCE UNEXPECTED WATER SEEPAGE OR RETENTION IN TREE OR SHRUB PLANTING PITS.

TREE & SHRUB PLANTING

1. BEFORE PLANTING VERIFY THAT ROOT FLARE IS VISIBLE AT TOP OF ROOT BALL. IF ROOT FLARE IS NOT VISIBLE, REMOVE SOIL IN A LEVEL MANNER FROM THE ROOT BALL TO WHERE THE TOP-MOST ROOT EMERGES FROM THE TRUNK. AFTER SOIL REMOVAL TO EXPOSE ROOT FLARE, VERIFY THAT ROOT BALL STILL MEETS SIZE REQUIREMENTS. PLANT MATERIAL WITHOUT ROOT FLARE VISIBLE OR PLANTED TOO LOW WILL BE RE-PLANTED AT THE REQUEST OF THE LANDSCAPE ARCHITECT AT NO ADDITIONAL COST TO THE OWNER.
2. PLANTS FOUND TO HAVE STEM GIRDLING ROOTS AND/OR KINKED ROOTS AT THE TIME OF PLANTING WILL BE REJECTED AND REPLACEMENTS SHALL BE PROVIDED AT NO ADDITIONAL COST TO THE OWNER.
3. REMOVE ALL TWINE, STRING, WIRE, AND ALL OTHER NON-BIODEGRADABLE MATERIAL ENTIRELY FROM ROOT BALL AREA.
4. REMOVE ONLY DEAD, DYING, OR BROKEN BRANCHES. DO NOT PRUNE FOR SHAPE. DO CUT TREE LEADERS.
5. SET BALLED AND BURLAPPED STOCK PLUMB AND IN CENTER OF PLANTING PIT OR TRENCH WITH ROOT FLARE 2 INCHES ABOVE ADJACENT FINISH GRADES.
   - 5.1. USE SOIL MATERIALS FROM EXCAVATION FOR BACKFILL.
   - 5.2. CAREFULLY CUT AND REMOVE BURLAP, ROPE, AND WIRE BASKETS FROM THE ENTIRE ROOT BALL. REMOVE PALLETS, IF ANY, BEFORE SETTING. DO NOT USE PLANTING STOCK IF ROOT BALL IS CRACKED OR BROKEN BEFORE OR DURING PLANTING OPERATION.
   - 5.3. BACKFILL AROUND ROOT BALL IN LAYERS, TAMPING TO SETTLE SOIL AND ELIMINATE VOIDS AND AIR POCKETS. WHEN PLANTING PIT IS APPROXIMATELY ONE-HALF FILLED, WATER THOROUGHLY BEFORE PLACING REMAINDER OF BACKFILL. REPEAT WATERING UNTIL NO MORE WATER IS ABSORBED.
   - 5.4. CONTINUE BACKFILLING PROCESS. WATER AGAIN AFTER PLACING AND TAMPING FINAL LAYER OF SOIL.

Jonathon,

The proposed residential project is not disturbing more than 1 acre of land nor is it adding more than 5,000 square feet of impervious area, so it is exempt from any local or State stormwater requirements.
